

## **Problem**

This health organization was in need of a nurse to hold responsibility for prior authorization and manage their large backlog of cases. This professional needed to have an in-state registered nurse license and utilization management experience. In addition, the company required support for their approval and denial letters.

## **Response**

Jacobson provided a utilization management expert with **twenty-five years of experience** as a registered nurse and a background in managed care. Her written and verbal communication skills, in addition to customer service experience, were a strong match for the position.

## **Solution**

This professional was able to step in and immediately began working on our client's case backlog. The client was so pleased with the consultant's performance she was **offered a permanent position** after ten weeks on the project.

Care Management
