

Problem

This life insurance company was in need of an actuary to assist with their increased modeling work. A recent employee departure had left the actuarial team low on resources. Combined with multiple tight deadlines on current and upcoming projects, the department required additional assistance.

Response

Jacobson provided an actuarial specialist with working knowledge of Moody's Analytics AXIS actuarial system. The actuary needed to port valuation modeling work to a productional valuation model. The consultant provided was comfortable with critical thinking and problem - solving in this area, in addition to his understanding of the code.

Solution

The specialist successfully brought the actuarial team back up to speed on their workload. He ported the modeling functionality as needed, and additionally supported the team by conducting regression testing. The consultant's work alleviated the burden on the short-staffed team, and his assistance allowed them to meet project deadlines as needed.
