

Regulatory and Compliance Specialist

Client Type:
Health Plan

Project Scope:
Small-market Group Plan

Duration:
3 Months

Team Size:
1 Compliance Specialist

Problem

The client needed **regulatory and compliance guidance** as they launched a new, small-market group plan that would become effective at the beginning of the year. They also needed an expert who could **research and handle policies from a regulatory and compliance perspective** in relation to state, as well as federal (Affordable Care Act) requirements.

Solution

In just three months, the consultant provided the necessary research and direction to ensure the small-market, commercial-product plan was compliant with all requirements of the Affordable Care Act. The expert also provided the client with desktop tools for various departments as a reference for regulatory requirements. As a result, the **client's expectations were far exceed** with the research and guidance that was given. In addition, the tools could be used in the future for ongoing regulatory changes.

Response

Jacobson was able to supply a single subject matter expert who could provide **regulatory compliance expertise, create a plan to drive performance**, ensure operational and quality compliance with CMS, and **evaluate commercial markets and state regulatory standards across different states**.
